Ubuntu 2024 Workshop

Facilitators:

Improving Opportunities for Primary Care and Advocacy for Family Violence (IMOCFV): Building consensus

Facilitators:

Joyce Kenkre. Emeritus Professor

Her numerous publications are wide ranging: the prevalence of heart failure, the cost of accidents in the elderly, evaluation of routine enquiry for domestic abuse, careers for nurses in research, care for young mothers and their children and analysis of large monitoring datasets.

Leo Pas, EFJCA consultant and retired GP research collaborator of University of Leuven, Belgium*

**European Family Justice Center Alliance*

Leo has 45 years of experience in mixed methods research on health promotion and prevention; he started on cancer and breast cancer screening, co-chaired the Primary Care diabetes Group Europe, initiated the INEBRIA network for alcohol and drugs brief interventions and convened the WONCA Special Interest Group on Family Violence in 2014.

Dr Anne Achieng Aseey is the Chairperson, Department of Educational and Distance Studies, University of Nairobi, Kenya. Anne was integral in setting up Gender Units in Universities and other higher institutions in Kenya and other African Countries through the Association of Commonwealth Universities- Gender Network Programme.

Professor Roiyah Saltus

Her numerous publications are linked to her core research areas: dynamics of ageing, relational wellbeing, arts-based methodology, community development and health inequalities, focusing on marginalised, migrant and racialised population groups.

Synopsis

A short presentation will be given on the findings so far from the international to improve Opportunities for Primary Care and Advocacy for Family Violence (IMOCAFV) by building consensus. A nominal group technique will be used generate ideas, discuss and rank them in order of tasks and strategies to deal with family violence in primary care.

Learning Outcomes

Establish the perspectives, opinions and attitudes of health care professionals on their potential professional role now and in the future to address FV.

Consider a multidisciplinary approach, taking into account cultural differences and values in rural areas.

Generate a minimum set of recommendations as guidance to effectively implement FV care identification and management of in primary care practice.
